# NATIONAL WORKSHOP TOPOGRAPHIC AND GEOPHYSICAL SURVEYING

## About the Workshop

Topographical Surveying is an art and science of determining the terrestrial or three-dimensional positions of points and the distances and angles between them. The points surveyed are being used to establish locations, boundaries for natural and cultural features etc. They are helpful in preparing plans and effective maps for better decision making. Professional surveyors work with elements of geometry, trigonometry, regression analysis, physics, engineering, programming languages for customization and law of the land. Modern Survey equipment's such as clinometers, theodolites, total stations, robotic total stations, GPR, subsurface locators, GNSS receivers, 3D Scanners, drone, LIDAR etc. have reduced the time and persons involved to locate features both above and below ground.

Surveying is an important part of geography curriculum and geographer's profession. Doing away or ignoring the know-hows of latest survey equipments and methods not only harm the career prospects, but also will degrade the field research capabilities of young geographers. Hence the workshop is an attempt to bridge the existing gaps in geography with that of modern survey prospects.

Department of Geography, Government College Chittur with support of Department of Collegiate Education, Government of Kerala, is organizing a **Five Day National Workshop on "Topographic and Geophysical Surveying"** from **16<sup>th</sup> to 20<sup>th</sup> December 2019**. Objective of the workshop is to provide hands-on-experience in using GPR, GNSS Receivers, and Total Station survey equipments to collect, process, analyze and visualize spatial data.

The workshop is open to faculty members, research scholars of Geography, Geology, Environmental Science and allied sciences. To register for the workshop please contact the coordinator through email. (**Forty** participants on first-cum-first-serve basis will be selected).

## Objectives

- On completion of the Workshop participants will be able to:-
- Understand aspects of topographical and geophysical survey
  - Use total station and prepare plan maps
  - Use Total station and GNSS receiver to undertake topographical survey
  - Use Aquameter to carry out groundwater survey
